free # Chapter 6: 3D Printing 3D printing is a very important and important new technology in the world of today. It can be used to create practically any shape or form you want at minimal cost. Many industries and applications are using this technology which makes it more powerful than ever. In this chapter we will discuss the different steps involved in 3D printing. 3D printing is actually based on the additive technology. It uses a technology called the Fused Deposition Modeling (FDM) or the Fused Filament Fabrication (FFF). This technology works on the principle of building a 3D object one layer at a time using a filament. If you have used a 3D printer before, you would have noticed that the filament comes in a spool and can be easily pulled out using a spool-feeder. The FDM is a printing technology that creates 3D models, which can be used for a wide range of applications. Some of the major benefits of using 3D printing technology are listed below: * **The flexibility:** The 3D printing technology allows you to print 3D objects of any form and size. This is the main reason why it is being used widely by so many industries. * 82157476af
